
hCG

Hormone-Free Vibrational Infusion

Lose Up to 1 Pound Per Day

hCG Vibrational Infusion melts away fat cells to promote safe and effective weight loss

Product Overview

- Human Chorionic Gonadotropin (hCG) is a naturally occurring hormone in the body of pregnant women. Studies support the effectiveness to suppress the appetite and accelerate weight loss
- hCG Vibrational Infusion is formulated by achieving the exact vibrational charge of the hCG hormone and transferring them into a stable and beneficial substance
- Pure glycerin is used to moisten the body's connective tissues, allowing faster and more stable absorption of the vibrational charge
- The hCG protocol begins with two days of fat-loading to stock the cells with fat, which prevents them from going into starvation mode when calories are reduced. After the load days, there are 21 to 55 days of a very low calorie diet (depending on the desired weight loss plan)
- Drop pounds and cut inches with this scientific breakthrough in hormone-free therapy, where you'll experience noticeable results in your first week
- Results may vary, and in most cases people who have struggled with weight loss finally get the results they've always wanted, without starvation, pills, shakes, or expensive gym memberships
